

What transfers beyond faces?

CUB-200 keeps strong, separate factor directions - but loses their cube-like composition.

MODEL / DATASET	FACTOR SIGNAL weakest of 3 higher = stronger	DIRECTION OVERLAP 0 = perpendicular	CORNER MISMATCH 0 perfect; shuffled ~ 1	MEANING
VICReg / CelebA Smiling Wavy Hair Black Hair	0.150	0.090	0.218	CUBE TRANSFERS
I-JEPA / CelebA Black Hair Smiling Arched Eyebrows	0.112	0.117	0.247	CUBE TRANSFERS
VICReg / CUB-200 breast color: white primary color: black breast pattern: solid	0.373	0.122	0.503	NO RELIABLE CUBE TRANSFER

The CUB failure is specific: factor information and direction separation remain strong, while the eight combined groups miss the training-predicted corners.
